

Nimbus Robotics: Company Fact Sheet

Company Overview

Nimbus Robotics Inc. is a robotics company founded in 2018 and headquartered in Austin, Texas. The company designs autonomous warehouse robots used by logistics providers to move inventory between shelves and packing stations. Nimbus Robotics currently employs 340 people across three offices: Austin, Denver, and Toronto.

Founders and Leadership

Nimbus Robotics was founded by Maria Chen and David Okafor. Maria Chen serves as Chief Executive Officer and David Okafor serves as Chief Technology Officer. The company's Chief Financial Officer is Priya Nair, who joined in 2021.

Flagship Product

The company's flagship product is the NimbusCart, an autonomous mobile robot that can carry up to 500 kilograms and navigate warehouse floors using LIDAR and computer vision. The NimbusCart has a battery life of 10 hours per charge and a maximum speed of 2.2 meters per second.

Funding History

Nimbus Robotics raised a \$5 million seed round in 2018, a \$22 million Series A round in 2020 led by Highline Ventures, and a \$60 million Series B round in 2023 led by Cascade Capital Partners. Total funding raised to date is \$87 million.

Customers

Nimbus Robotics serves over 40 warehouse customers, including two of the five largest grocery distributors in North America. Its largest customer, FreshLine Distribution, has deployed 120 NimbusCart units across four regional warehouses since signing a contract in 2022.

Recent Milestones

In January 2025, Nimbus Robotics announced the NimbusCart Mini, a smaller robot designed for retail backrooms rather than large warehouses. In June 2025, the company opened its Toronto office to support Canadian customers and expand its robotics engineering team.
